C DNA clones TRKI (T31307) and TRLI (T31308) were isolated from the conferring primers (T31301-06) based on the camplification of tomato cDNA using primers (T31301-06) based on the crice disease resistance xa21 gene (T31300). They belong to the RRK C family of disease resistance genes. TRKI (tomato receptor kinase 1) is present as 1 or 2 copies in the tomato genome and 1 copy maps to the short arm of chromosome 1 in the proximity of a resistance gene to Xanthomonas campestris pv. vesicatoria RXI. It encodes an RKK protein (W03186) that is an important component of plant signal cransduction pathways leading to a defence response. The gene is useful for engineering disease resistance in tomato and other plants. So Sequence 1554 BP; 477 A; 303 C; 348 G; 426 T;

This invention describes a method for conferring disease resistance plants. The invention describes the use of novel genes and proteins belonging to the Oryza longistaminata and Oryza sativa receptor kinase-like protein (RRK) Xa21 multigene family. Such genes from Kinase-like protein (RRK) Xa21 multigene family.
DNA encoding plant morphogenesis regulatory protein - useful to yield plants with short stems or altered inflorescence Claim 1; Pages 6-10; 17pp; Japanese.

The present sequence encodes an Arabidopsis thaliana plant morphogenesis regulatory protein (MRP), which can be used to yield a plant with, e.g. short stems or altered inflorescence. The MRP acts on a plant at a specific site for a specific period, and can therefore be used to regulate extraneous gene expression in a plant. The MRP's cDNA or genomic DNA can be used to transform a plant to increase its MRP expression, and therefore control the
                                                                                                                                                                                                                                                                                                               709056382-A.

The MRP acts on a plant at a specific site for a specific period, and can therefore be used to regulate extraneous gene expression in a plant. The MRP's cDNA or genomic DNA can be used to transform a plant to increase its MRP expression, and therefore control the form (particularly stem length) of the plant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New receptor kinase Bini involved in brassinolide signalling - PT New receptor kinase Bini involved in brassinolide signalling - PT plants and for modulating occyte maturation
PS Claim 8; Page 49-52; 72pp; English.

CC This DNA sequence codes for a novel plant steroid receptor kinase,
CC designated Bini (see W97819), which is involved in the pathway for
CC the synthesis of the plant steroid hormone, brassinolide. 18 New
CC Arabidopsis dwarf mutants were identified that lacked the ability
CC to respond to brassinolide, and were named bin mutants. The bini
CC mutations were used to map the gene to a small interval on
CC The Bini polynucleotide was identified within this interval by
CC sequencing the wild-type and mutant alleles of this nucleic acid.
CC overexpression of Bini in transgenic plants provides plants
CC characterised as having enhanced disease resistance, increased
CC plant yield or vegetative biomass and increased seed yield.
CC Expression of Binl, e.g. using antisense oligonucleotides (AON), is
CC used to render plants male-sterile, and to reduce their stature or
CC yield, e.g. for creating dwarf varieties. Since Bini homologues
CC function, Bini, antibodies and AON may be useful as contraceptives,
CC models for studying steroid-receptor interactions or can be used
CC models for therapeutic agents.

This invention describes a method for conferring disease resistance plants. The invention describes the use of novel genes and proteins belonging to the Oryza longistaminata and Oryza sattiva receptor kinase-like protein (RRK) Xa21 multigene family. Such genes from cassava, maize and tomato are also described. The genes and proteins
                                                                                                                                                                                                                                                                                   03-AUG-1998 (first entry)
Arabidopsis thaliana SERK LRR homologous EST clone.

"Vector: pBluescript II XR; Site_1: EcoRI; Site_2:
"Vector: pBluescript II XR; Site_1: EcoRI; Site_2:
The mRNA was isolated from roots of Glycine max nod' plants generously donated by Dr. Gary Stacey.
ediings were innoculated with Bradyrhizobium cus, strain USDA110 priot to harvest. Stratagene's ynthesis Kit (catalog number 200401) was used to size the cDNA. First-strand synthesis was performed methyl dCTP, hence the ligated cDNA was thylated. A modification of Stratagene's strand synthesis primer was used. An 'anchor' tide (V-A,C, or G) was added to the 3' end of the [GAGAGAGAGAGAGAGAGAGAGAGTAGTCTCCAG(T)18V] to anchor incr at the 5' end of the poly(A) tract. After-strand synthesis, the cDNA ends were filled in with Pfu DNA polymerase, ligated to EcoRI adapters and uently phosphorylated. The XhOI site within the strand synthesis primer was then restricted by ion with XhOI; all XhOI sites in the cDNA would be ted by their hemimethylated status. The cDNA would be ted by their hemimethylated status. The cDNA would be ted by their hemimethylated status. The cDNA would be ted by their hemimethylated status. The cDNA GIDCOBRI Life Technologies' cDNA Size Fractionation gene's pBluescript II XR Predigested vector script II SK(+) that has been digested with EcoRI of, and phosporylated by Stratagene). Both the and blue colonies appear to contain recombinant ds with cDNA inserts, based on size (n-25). This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note="vector: pBluescript II XR; Site_1: EcoRI; Site_2: XhoI; This cDNA library was constructed from mRNA isolated from the apical shoots of 9 to 10 day old etiolated seedlings. The shoot tips including any emerged leaves were harvested for mRNA isolation. The CDNA library was prepared using the Stratagene pBluescript II XR CDNA library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The CDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into XLIO-Gold host cells. This library was constructed by Dr. Randy Shoemaker and Dr. John Erpelding."
